SAFETY DATA FOR PRACTI-SHIM™ MATERIAL

Practi-Shim™ is a color-coded plastic shim stock in thicknesses from .0005" to .060". The material is color-coded to provide users with an accurate, reliable recognition of thickness for ease of use. Practi-shim™ is available in #222 and #333 colored to the appropriate thickness and can be purchased in sheets or rolls.

The appearance of Practi-Shim™ is a bright colored metallic plastic film that is insoluble in water with no boiling point or vapor pressure. Practi-Shim™ material is non-flammable and non-reactive. NO TOXIC EFFECTS ARE KNOWN through eye contact, skin absorption, skin contact, or inhalation.

In case of release of material, shovel into a solid waste container and discard according to the Resource Conservation and Recovery Act (RCRA, 40 CFR 261). Practi-Shim™ is not a toxic material and does not require any hazardous labels or disposal requirements. Practi-Shim™ complies with RoHS information that bans cadmium, hexavalent chromium, lead, mercury, PBBs (polybrominated biphenyls), and PBDEs (polybrominated diphenyl ethers).
